Note To get the maximum performance, keep your brushes and colors as neutral as possible. Also, don't use the background brushes, including the "B&W" or "Colored" brushes. 3. \*\*Choose Image\*\* → \*\*Image Size\*\*. The Image Size dialog box appears. (You may need to click the Image Size button in the bottom-right corner to open it.) 4. \*\*Enter 800 for Width and 600 for Height\*\*. You can use the slider to see the effect before you click OK, as shown in Figure 11-5. Figure 11-5. The Image Size dialog box has buttons for changing the dimensions. To the right, you can see the results of a change in the size of the image. In the example shown, the Width is expanded to 1,600 pixels (the slider on the left is the Width box). 5. \*\*Move the cursor to the\*\* \*\*Image Size\*\* \*\*dialog box\*\*. You can see the pop-up arrow in the gray box that's on top of the Width box. When you move the cursor over it, a tooltip appears: "Enter width or height dimension (in pixels)." 6. \*\*Click inside the Width box to change the number, and then press Enter\*\*. The dialog box returns to its original state, as you can see in Figure 11-5. 7. \*\*Type 600 for the Height box\*\*. By typing into the Height box, you're telling Photoshop to enlarge the image 1,600 pixels, creating an image that's 1,600 pixels tall (the width of the dialog box). 8. \*\*Click OK\*\*. When you open an image that's larger than the dialog box, Photoshop makes the adjustment. In the next steps, you'll work with this new image.

It's extremely easy to learn and very powerful but also extremely slow. Learn Photoshop Elements The Easy Way Photoshop Elements is an easy-to-use photo editor. It's the reason why it's so popular. But it's also the reason why Photoshop Elements isn't a pro-level tool. With ease, you can get the job done just fine but you're going to be frustrated at the speed. So let's learn how to use Photoshop Elements by making a simple retouching job. Just take a picture or make a design mock-up in Photoshop and learn the basics of editing photos. For every problem, there's a solution (or at least there should be). It's your turn to apply solutions. Photoshop Elements is a photo editor, but it's a good idea to learn the essentials of it first. They're what you need to know to create graphic elements on your own. So let's kick-start by learning about... Images and the creation process RGB : A pixel can be of three colors. Red, Green and Blue. Usually, Photoshop uses a 24-bit color depth or a 32-bit color depth. Each RGB color also has a value between 0 to 255. In a pixel, the Red color must be between 0 to 255 and then the same for Green and Blue. On the graphic, the color will mix and you'll see colors that weren't there before. You'll also see in the paintbrush that some parts are already colored with these RGB colors. For example, let's say that the part of the image is white (255, 255, 255), it's the same color as the brush. : A pixel can be of three colors. Red, Green and Blue. Lies We Tell Ourselves This semester I've been studying critical theory, and how propaganda works. The work of structuralist theorist Pierre Bourdieu is particularly relevant as well, and he once described propaganda as a lie we tell ourselves. I first came across this quote while reading Bertolt Brecht's art critique, "The Threepenny Opera". One of the objects in the work described how greed, political ambition and psychosis are promoted as a means to power, while the alternative is presented as a meaningless life led in an artificial, duplicitous state. The emotional response to Brecht's work was immediately clear to me – I found it horrifying, and I've returned to the script several times since. It was Brecht's explicit analysis of the nature of power and the way it works that made it so disturbing. Later, I read a preface to the play written by the Swiss author, Christa Wolf, that contained the same idea – propaganda is a lie we tell ourselves. We tell ourselves lies because we don't understand what is happening, and we are vulnerable to the persuasive power of those who do

### What's New In?

Encounters with exotic marine life are a regular feature of diving in the Gulf of Mexico. But one creature in particular is a regular visitor to the region: the frogfish. Frogfish are related to the anglerfish, which is widely known as a bottom-dweller, and you can see them basking on coral reefs around the world. Marine biologist Adriana Krubitzer investigates the animals on a regular basis. She spends her time in the Gulf of Mexico, studying the coastal waterways around the island of Grand Isle, Louisiana. Where the frogfish are Frogfish live in the oceans of the world. They appear to prefer the tropical waters around the Caribbean, but it is not known where exactly they live. There is some suggestion that they live in shallow tropical waters, close to coral reefs. We might expect them to be found further to the east, at the edge of the Caribbean Sea, but frogfish have been found in the Gulf of Mexico, well away from the coast. So where are they now? Adriana Krubitzer and her colleague Maria Luis interviewed an underwater photographer who said he had dived in the region several times. The photographer said he knew there was a large concentration of frogfish near the island of Grand Isle, but he had never seen them. Adriana and her colleagues later spent time diving in that area and filmed more than 50 frogfish. Frogfish are large animals, often about 10 centimetres in length. They have several pairs of tentacles with long barb-like structures. The frogfish in the US Gulf are different from the black-footed frogfish of Australia. Adriana found that each fish had a different colouration. Some were golden yellow, some green, and others were more greyish. It is clear from these video clips that frogfish are not shy animals. They are often found on the surface of the water, in the open. Frogfish are a diverse group and can be separated into several subgroups. They do not belong to any kind of fish we know, but have many characteristics of fish, which is why they are placed in this group. The frogfish with yellow spots in the centre is a subgroup called monacanthids, which have long lobed barb-like structures. Frogfish that are placed in the subgroup Tylosomatidae have short, tooth-like projections on
