The value of the ELISA for the identification of C. difficile in clinical specimens was also evaluated. The sensitivity of the antigen ELISA compared with toxin assay was 91%, specificity 91%, positive predictive value (PPV) 95% and negative predictive value (NPV) 87% when the value of the ELISA was above 3.17. The clinical usefulness of the ELISA is illustrated by the identification of C. difficile from clinical specimens that would otherwise have been
