You can use Photoshop without a subscription — you just need to purchase an in-application upgrade, either as a new version or as an annual purchase ($79.99 to $999.99 per year). The upgrade can be applied to your current subscription for users with a subscription and lasts for only one year. The newer Photoshop Elements versions do not require a subscription, so you can purchase them on their own for a one-time cost of around $89.99. ## Using Photoshop In Photoshop, you work in three dimensions: width, height, and depth. Photoshop allows you to create any type of object: * **Raster images:** Raster images are composed of pixels and composed of a flat image. * **Vector images:** Vector images are composed of geometric shapes. In other words, they have a gradient, not an image. * **3D models:** 3D models are composed of both raster and vector layers. They appear as solid objects and can be manipulated in 3D space. Some of the features of the following sections will be familiar to you if you use other Adobe programs. However, you'll find some unique tasks within Photoshop, such as the ability to create complex 3D models and work with photorealistic settings that are not available in other Adobe products, such as Elements and Photoshop. ## Choosing a workspace Before you start working, you need to choose a workspace that meets your needs. (These options don't change, so you can follow along as you work through the chapters in this book.) The following sections provide you with a rundown of the choices you have in setting up your workspace before you start your editing. They include a basic rundown of the various components in Photoshop and show you what is housed in each workspace.

We compare Photoshop and Photoshop Elements images side by side to help you make better decisions about which one to use. How we created our images To create our side by side comparisons, we created images using three different images. A set of three images is a great way to make sure that any flaws in one image don't affect the two others. We used a screenshot from

each software to create the two images in each set of three. These were then saved as either PNGs (for high-quality images) or JPGs (for low-quality images). Note: Our Photoshop and Photoshop Elements comparisons use a 24-bit color depth. Check out our articles on best-practices for creating Photoshop images and Photoshop Elements files. Note: Your browser needs to support the canvas tag to be able to view these graphics. What's in these images? Each image contains the following: The original image A low-quality version of the image with the same colors A high-quality version of the image with the same colors A low-quality version of the image with the same noise and flaws A high-quality version of the image with the same noise and flaws We used a standard 24-bit Photoshop color mode to create the low-quality images. We then converted these low-quality images into high-quality images at a 48-bit color depth. We used the same technique for the Photoshop Elements versions of the images. Because elements was designed to look like Photoshop in some way, we used the graphics tools within it to create the versions of the images with the same noise and flaws in the original Photoshop versions. Which programs and images do these images look like? Because we only created the images using the tools in Photoshop and Photoshop Elements, we can't say with certainty if they look like Photoshop or Photoshop Elements. They're close, but you'll have to decide for yourself which you prefer. The original images In the original images, you'll notice that both versions use the same color depth and the same number of colors per pixel. This gives you an idea of how the images are made in each program. The low-quality versions, though, have colors that differ slightly from each other. This shows you that each program alters the colors a little differently and in different directions. The low-quality versions a681f4349e

Prevalence of the Ebola virus in bats from Sierra Leone. Seventy-three bats were captured in five of the six West African countries affected by the Ebola virus in humans and from which the virus has never been isolated. Bats from Guinea, Liberia and Sierra Leone tested positive by enzyme-linked immunosorbent assay. Virus isolation was attempted from bats of the Pteropodidae family and Myotis bats, and from all four species of bats captured in Sierra Leone. None of the 139 blood samples tested from the Pteropodidae bats, 33 of 269 from Myotis bats and 6 of 17 from Triaenops bats were positive. All of the sera tested positive by indirect immunofluorescence were also positive by neutralization. No Ebola virus was isolated from any of the 109 samples tested.Q: CakePHP 3.x: How to get a list of HTTP request headers in error response? How can we get a list of HTTP request headers in error response of a request made in CakePHP 3.x? To be more specific, I have a REST API that can return "unexpected" responses for certain requests. I'd like to capture the HTTP request headers so that I can log them when an error occurs. For example, suppose we send a request to "/api/docs/hello". When this request returns a 404 or 500 response, I'd like to log the following HTTP request headers: Origin Accept Pragma A: I'm assuming that you want to get the request headers of the current request. You can use Request::$query to get that information. /** * Returns information about the request. * * @return array */ public function getCurrentRequest() { return $this->request->query; } To get the headers of the current request you will use: /** * Returns the header values of the current request. * * @return array */ public function getCurrentRequestHeaders() { $headers = $this->getCurrentRequest()['headers']; if (!is_array($headers)) { $headers = array_map(function ($value) {

Byrne Dizney/IPS "We can still see the smoke rising from their slag heap," said Shubhada Samadh, 70, as she tended her vegetable plot in the village of Rueda, in Samadiya district of Kashmir's Shopian district. "We used to clean their piles of fire-blighted timber with water and ashes, but we are no longer able to do so," she said. Shopian and Samadiya districts in the Kashmir Valley are reeling under acute power cuts. Electricity distribution company Circle of Power has asked its workers to cut power in these districts on Fridays, so that they can attend to the needs of emergencies in Greater Kashmir. Shopian district has been hit the hardest with electricity outages more often than other parts of Kashmir. Rueda is part of Shopian district, and accounts for more than one third of the total losses on the Shopian-Samadhiya line. In the last four years, Circle of Power has asked its workers to bring power outages to an end on Fridays. "The power lines are broken and there is no diesel supply," said Rasheed, a water tanker driver, adding, "We don't know when electricity would get restored." "I want my children to have food, medicine and a good education," said Samadh. "I don't want to see them die of poverty and disease." Even in otherwise-peaceful areas of the Valley, people are reeling under power shortages. "We are having a difficult time managing," said Mohammad Yaseen, a resident of the Bassi area of Badgam district, as he struggled to manage his three and a half hour outage, which began on March 21, the beginning of the apple season in Kashmir, when farmers begin reaping their harvests. "For more than six days, we have been receiving electricity from the reserve supply. Even then, the main supply is also used up," he said. In Balakot district, a father of four said his children have developed breathing problems because of the power cuts, and have been making frequent visits to government hospitals. "My children have started to cough and face respiratory problems," said Mohammad Mir, 40, as he and his
