Field of the Invention This invention relates to a stethoscope and a handle therefor which facilitate detection of the range of cardiac activity associated with the peripheral body tissues detected by the stethoscope, and generally of the underlying cardiac activity, as it passes through the peripheral body tissues. 2. Description of the Prior Art In monitoring the heartbeat and associated cardiovascular activity, there are basically two methods known to the prior art for obtaining a continuous record of the pulse. In the first of these methods, an electrocardiograph such as the Hall Electrocardiograph Model 2034, known also as the "Skin Electrocardiograph," is employed. In a second method, called the "Pulse-Radar" method, a pulse detector, such as that developed by the inventor of the present invention, is utilized in conjunction with an ultrasonic detector, such as that developed by the inventor of the present invention. The pulsed ultrasound technique may be applied to a wider group of physiological phenomena, such as total body temperature, than is possible for the electrocardiographic method. There are two distinct modes of heartbeat detection in the peripheral body tissues using the Hall electrocardiographic device. A first mode, known as the "thoracic approach," is initiated with an electrode placed on the patient's chest, with the electrode being driven by the "pulmonary shot" of the ECG apparatus. A second mode, known as the "vascular approach," is initiated by driving the electrode on the patient's chest with one of the electrodes of the Hall electrocardiograph, and has the electrode being positioned on the blood vessel where the blood pressure fluctuates. According to this technique, the blood pressure fluctuation is caused by the heartbeat at the peripheral body tissues. The first mode is more readily applied to the detection of the "

To do so, insert your DVD and launch Nero right away. Once installed, navigate to Content Library, then DVD/CD Creator and then DVD-Video, then select Convert. If you have a Windows version older than Vista, the menu of discs has changed. Now you have two options to choose: DVD/CD Creator or Discs Explorer. Select the DVD or CD drive, or the name of the DVD you want to burn and click the Burn button. When finished, you can use the Burnable Disc feature to create a disk image and place it in any folder.
