BestCrypt Volume Encryption 3.62.11 License for Windows.Q: Why does the number of selected records change after a Pivot chart? I am having a problem with a PivotChart where the number of records change. I have a Dataset which when called read the data (260+ thousand records) from my DB. After that, the code loops through each unique product category in the dataset and creates a PivotChart: For Each pCat As DataField In dt_Sales.Columns dt_Sales.DefaultView.Sort = dt_Sales.Columns(pCat) For Each pCmp As DataField In dt_Sales.Columns dt_Sales.DefaultView.Sort = dt_Sales.Columns(pCmp) Next pCT = dt_Sales.DefaultView.Sort.Count dt_Sales.DefaultView.ToTable pvt_Sales.DataSource = dt_Sales.DefaultView pvt_Sales.TableName = "Pivot" pvt_Sales.Postion = 1 pvt_Sales.EnableExternalFilters = True pvt_Sales.ColumnHeaderText = "Category" pvt_Sales.RowHeaderText = "Region" With pvt_Sales.Axes(xlValue) .HasTitle = True .AxisTitle.Visible = True .AxisTitle.Caption = "Sales Volume" End With pvt_Sales.Axes(xlCategory).HasTitle = True
